**向源侵蝕 (Headward Erosion)**  
 向源侵蝕為地質營力作用中河流侵蝕作用的一種，此作用在發育中的小河上游或是新生的支流最顯著，向源侵蝕作用的結果，往往因谷頭岩壁陡峻，岩層崩解，土石滑落，致使源頭向上伸展，河流長度增加。源侵蝕簡稱「源蝕」，又稱河流加長作用 (valley lengthening)。上所示即為濁水溪最上游的向源侵蝕。

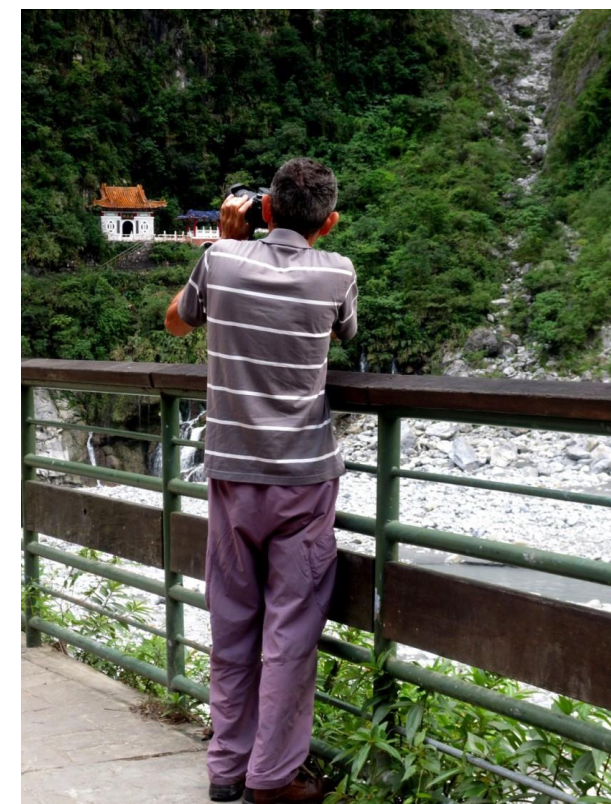

**Headward Erosion**  
 Headward Erosion is a geological process commonly observed at the head of a stream or new tributary. Erosive forces break up the rock mass above the stream source, causing slippage, tilting and upward extension of the stream, a process also known as valley lengthening. The illustration shows headward erosion in the top reaches the Jhuoshui River.
